

Buder water filter cartridge replacement guide:

It is recommended that the filter replacement is carried out by a competent person, as poor/incorrect installation can cause damage to the filter set and/or water damage to the surrounding area from leaks.

Please check water filter labels for maximum operating pressure and temperature.

1. Isolate the water supply to your filter set.
2. Open the tap that is connected to your filter set to check if the water supply has been isolated and to relieve any water pressure and then close the tap.
3. Place a bowl or towel underneath the water filters to catch any drips or spills.
4. Twist the filter cartridge 90 degrees to the left and pull down to remove the filter cartridge.
5. Insert new filter cartridge with the label facing to the left, push up and twist to the right to lock the new filter cartridge into place - the label should be facing forward.
6. Turn the blue dial at the neck of each new filter cartridge to the month number to which it has been installed.
7. Turn on water supply and check for any drips.
8. Turn tap on and run water through the tap for 2-3 mins to remove micro bubbles as these make the water appear cloudy.
9. Enjoy drinking your filtered water.

Manufacturers recommended replacement time frame:

Stage 1 (yellow): every 3 months

Stage 2 (red): every 6 months

Stage 3 (green): every 9 months

Ion Resin (orange): every 3-6 months

Ultra Fine Membrane (silver): every 12 months
